February 2010

CANADA

## UnderCover

### NEW PRODUCTS

#### **New slow-release fertilizer**

Commercial production has begun of Crystal Green®, described as the only slow-release fertilizer with a combination of nitrogen, phosphorus and magnesium (5-28-0 +10 Mg).

Crystal Green has been proven in industry and university trials to have commercial benefits for applications in turf, nursery and specialty agriculture industries. The product was developed by Ostara Nutrient Recovery Technologies Inc. Jim Zablocki, vice-president of Nutrient Operations for Ostara, said Crystal Green can be used in the same manner as widely used mono-ammonium phosphate or coated products, with the added benefit of high levels of slow-release magnesium.
